### **Impact of Search Engines on Page Popularity**

By comparing the popularity evolution of Web pages under these two models, we will be able to tell how much bias search engines introduce to the popularity evolution of Web pages. Our result shows that search engines can have an immensely worrisome impact on new Web pages. Our model predicts that it takes 60 times longer for a new page to be-

For SVC and SVR, LIBSVM can also output probability estimates. Many

variable. In light of these insights, we propose that interaction of two time-dependent variables be estimated by first demeaning each variable and then demeaning the product term. This “double-demeaned” estimator is not subject to bias caused by unobserved effect heterogeneity. It is, however, less efficient than standard FE and only
